Bishopric
for all
Time
and
Clime

*See how it Locks
the Stucco*

BISHOPRIC locks stucco or plaster in an inverted wedge clasp with a grip that holds for generations and the asphalt and fibreboard backing provide a better working arrangement for the plaster, saving the plaster that usually is lost through the open spaces in other forms of lath. Moreover, 25 per cent less plaster is required on account of the dovetail key construction and the plasterer does his work in less time.

Bishopric Stucco and Plaster Base is so rigid and strong that buildings, before the stucco has been applied, have been lifted from their foundations by storms without getting out of plumb or without a single wood strip being broken.

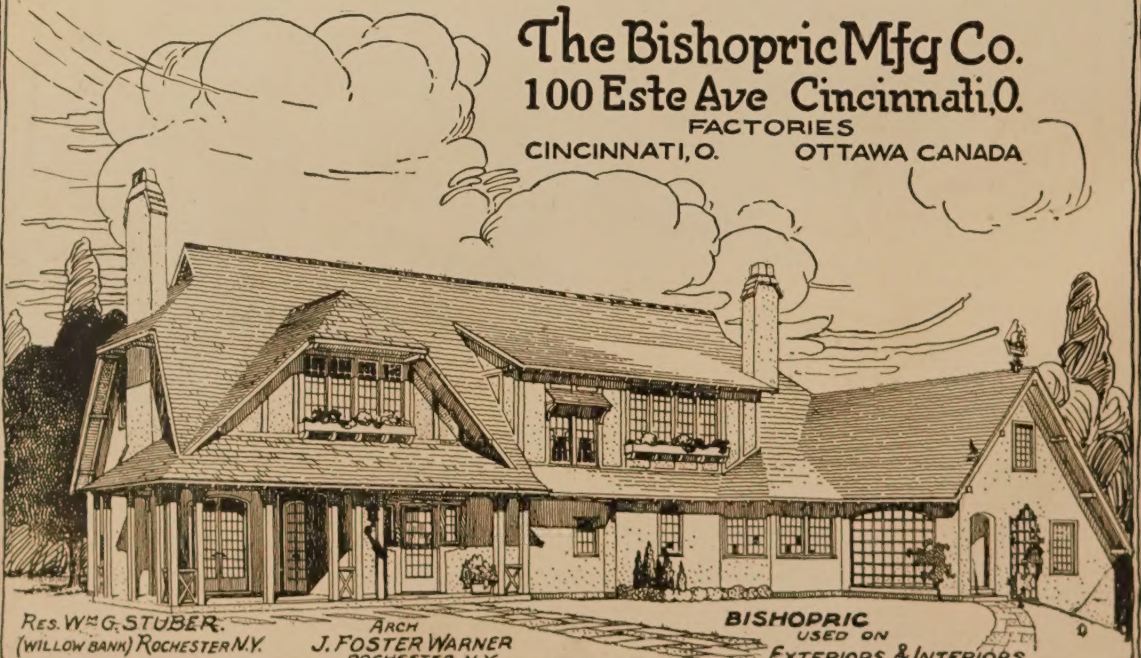

BISHOPRIC SHEATHING—Strengthening, insulating, sound-deadening, weather-proofing unit; for exterior walls, sub-flooring and sub-roofing.

BISHOPRIC STUCCO BASE—Interlocking dovetailed key, insulating and waterproofing unit; creosote treated and not treated; for exterior. Applied direct to the studding or over BISHOPRIC sheathing.

BISHOPRIC PLASTER BASE—Interlocking dovetailed key, insulating, moisture proofing and sound-deadening unit; for interior plaster walls and ceilings.

*We have prepared Special Technical Working Details
for Architects and Builders—Yours for the asking.*

Architectural and Structural Shapes

Fifth Avenue Office, Guaranty Trust Company, New York; Cross & Cross, Architects; Counterscreens fabricated by the Gorham Mfg. Co. from extruded shapes and mouldings manufactured by The American Brass Company.

Shaded portions
show application
of extruded shapes.

Extruded Metals

THE process of extruding metals makes possible the economical use of brass and bronze in architectural designs that require character and distinction, individuality in expression, quality that assures service, and reliability of uniform production.

Extruded mouldings and shapes as manufactured by The American Brass Company are particularly adaptable to cornice work, pilasters, grilles, wickets, counter work, base, door and window trim, screens, hand rails, balustrades, stair nosings, and similar art metal work.

These shapes are used for the interiors of banks, hotels, libraries, railroad stations, etc.; for elevator doors and enclosures; for entrance door and window construction; and other exterior uses.

Todhunter Mantels

EARLY ENGLISH AND COLONIAL

FINE REPRODUCTIONS
OF CHOICE ORIGINALS
IN WOOD AND MARBLE

The illustrations on this page are from our new plates of designs picturing mantels installed and furnished with the appropriate accessories.

We shall be pleased to send them to you upon request.

FIREPLACE EQUIPMENT

Originals and Copies
of Interesting Designs

1558. Clean cut reeded pilasters and fluted band across the frieze distinguish this Colonial mantel. Its character and proportions make it suitable for a medium sized sitting-room.

2110. Copy of mantel in Salem, Mass. The applied ornament of basket of fruit and flowers, with wheat sheaf end blocks, is typical of the period.

2094. Replica of an old mantel in Baltimore. Elaborately moulded with engaged elliptical fluted columns. Appropriate for a large dining-room.

COLONIAL HARDWARE
Hand-Forged Replicas of Old Pieces
LANTERNS AND WEATHER-VANES

Architectural and Structural Shapes

Extruded Metals

THE process of extruding metals makes possible the economical use of special shapes required to accurately reproduce the architect's designs.

Extruded mouldings and shapes as manufactured by The American Brass Company are adaptable to a wide range of architectural construction such as cornice work, pilasters, grilles, wickets, door and window trim, screens, hand rails, balustrades and similiar art metal work where character, distinction, and individuality in expression are a consideration.

These shapes are used for the interiors of banks, hotels, libraries, railroad stations, etc., for elevator doors and enclosures, for entrance door and window construction, and for other exterior uses.

The Ideal Light for Every Purpose

Specially Designed Lighting Units Enrich Interior Beauty of This Magnificent New Passenger Terminal

No. S-58834 UNIT

MADE COMPOSITION
ANTIQUE GOLD FINISH
ADAM ETCHED GLASS URN

PRICE ON APPLICATION

(DEPENDING ON QUANTITY REQUIRED)

Lighting fixtures, nowadays, are called upon to serve a much wider purpose than merely to furnish light.

To give light is, and always will be, their primary function, of course—and to give good light, efficient light, should be their chief purpose—but they must also help to preserve the dignity of design and architectural character of the interior of which they form a part.

This desirable combination of *Art* and *Efficiency* is perfectly obtained in these specially designed units.

As a recent installation we are pleased to present on this page a view of the handsome new passenger terminal just completed by the Missouri Pacific Railroad at Little Rock, Arkansas. Specially designed fixtures are used in the general and colored waiting-room, rest-rooms and ticket-office and in the smoking-room and lunch-rooms, giving a balance of taste and utility that is wonderfully pleasing and harmonious.

In the manufacture of lighting fixtures of all types it is a part of our designing and engineering service to co-operate with the architect to the fullest extent—and the service of these departments is at your command, at any time, without obligation.

We solicit an opportunity to submit designs and proposals on any special requirements—as well as on the Standard Brascolite line illustrated in our Catalogue No. 8, copy of which we will be glad to send upon request; also copies of our architectural series—a catalogue for each style of building.

TYPE W. F.

Handsomely decorated one-piece ceiling band finished in old gold. Reflecting plane in old ivory with Greek design in outer edge. 200 watt size using Standard lamp bulb will illuminate area 15 feet square. Price, \$30.00.

IN specifying Lighting Fixtures today the emphasis is upon *Lighting* rather than upon *Fixtures*.

The architect who specifies Brascolite provides scientific illumination in happy combination with the latest ideas of decorative art.

Based upon the idea that "Better Light Saves the Sight," Brascolite, perfectly combining the two principles of light transmission—diffusion plus reflection at the source of light—is designed to give the maximum of eye-health and comfort.

Its success is attested by its universal acceptance as the ideal light for every purpose. Its proved economy and service have made it the largest selling lighting fixture in the world.

BRASCOLITE

PATENTED AND TRADE MARK REGISTERED

The Ideal Light for Every Purpose

Specially designed fixture of Compo construction with old ivory tinted reflector base and ceiling band finished in antique gold. Bowl of calcite glass

High ceilings offer no difficulty when rooms are equipped with Brascolites

Brascolites were selected for the Illinois Bell Telephone Company's general offices after a careful consideration of the problem and various tests extending over a period of more than a year. Competent architects and engineers of the telephone company, as well as engineers outside their organization, were consulted, and all factors which should enter into the selection of lighting equipment were carefully considered in the light of experience gained from long-time operation of sample fixtures.

That the Brascolite has solved the problem in this case is evidenced by the photograph. The ceiling in this room is extremely high, and heavily beamed. The space is used for general office work of a particularly exacting nature, and a fairly high intensity was considered necessary as well as thorough diffusion and uniformity. An amber tone to the light was considered desirable.

Tests were made with various systems, and a special Brascolite with "Calcite" bowl and old ivory tinted reflector was selected as conforming most nearly to all of the rigid requirements. Even in the case of the extremely high ceiling the entire room presents a well-lighted appearance—a splendid illustration of the Brascolite slogan—"Better Light Saves the Sight."

Our general catalog, No. 8, pictures and describes the Standard Brascolite line—a Brascolite for every purpose. Let us send you a copy. We also have for distribution a series of special catalogs on lighting equipment to meet special requirements. Write us for the one that interests you: No. 1—Hospitals; No. 2—Banks and Office Buildings; No. 3—Schools, Colleges and Y. M. C. A. buildings.

Our Designing and Engineering Departments are at your service, without obligation, for any special requirements.

Entered as Second-Class Matter, March 30, 1900, at the Post-Office at New York, N. Y., under the Act of March 2, 1879.

Residence of Hon. Wm. Flinn
1455 N. Highland Ave., Pittsburgh, Pa.

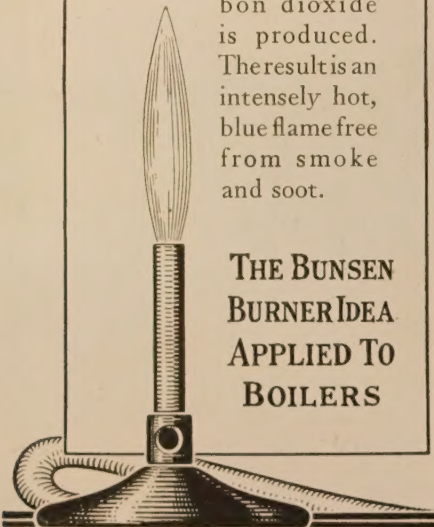

HEAT ALL LARGE
RESIDENCES WITH

Imperial Super-Smokeless Boilers

The Distinctive Feature of the Imperial Super-Smokeless Boiler

By drawing in a large volume of air right at the heart of the fire a perfect mixture of carbon dioxide is produced. The result is an intensely hot, blue flame free from smoke and soot.

**THE BUNSEN
BURNER IDEA
APPLIED TO
BOILERS**

LARGE and costly residences must be comfortably heated in winter. Imperial Super-Smokeless Boilers have demonstrated their efficient, economical and smokeless heating capacity in every type of large building.

They burn any grade of fuel, consuming the waste gases and will not form soot or produce smoke. The unique Bunsen Burner method of mixing air with the gases at the proper point produces an intensely hot combustion that reaches all sections of the boiler.

Foremost architects and the very best heating contractors recommend Imperial Super-Smokeless Boilers. Write for complete catalog and list of installations.

Utica Heater Company **Utica, N. Y.**
